Office Action Summary

Art Unit: 3753

This action is responsive to the communication filed November 25, 2002.

Claim 55 depends from cancelled claim 53. Many of the claims are redundant and out of order, e.g. claim 73 depends on 71 but 72 depends on 24. Applicant is requested to limit the claims to a reasonable number and properly ordered.

The following is a quotation of 35 U.S.C. § 103 which forms the basis for all obviousness rejections set forth in this Office action:

A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Subject matter developed by another person, which qualifies as prior art only under subsection (f) or (g) of section 102 of this title, shall not preclude patentability under this section where the subject matter and the claimed invention were, at the time the invention was made, owned by the same person or subject to an obligation of assignment to the same person.

Claims 24-25 and 54-80 are rejected under 35 U.S.C. § 103 as being unpatentable over EP 0 580 382 in view of WO 96/33081. EP 0 580 382 teaches a electro fluidic control valve assembly with pressure sensor 138 in recess 168 and member 169 transferring pressure forces to the casing. Sensor 138 is mounted to the circuit board. WO 96/33081 shows a similar valve assembly with a separate pressure sensor 9 connected by a flexible lead, shown at

10 in the drawings. It would have been obvious for one of ordinary skill in the art to have used such a separate sensor and lead in the valve of EP 0 580 382 to simplify construction, for example. Such sensor is read as "pot shaped".

The use of hydraulic fluid, such as in WO 96/33081, is considered an obvious design matter. The use of amplifiers and memory in the control of the system of EP 0 580 382 is considered to be obvious in view of the well known nature of such elements in electronic control.

Claim 55 is treated as though it depended from claim 54.

The Prior Art made of record and not relied upon is considered pertinent to applicant's disclosure.
